Helping Children Learn Mathematics Jul 16 2021 Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how weâ€™re teaching this discipline. Helping Children Learn Mathematics provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre--kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society.

Texas Sampler Jul 04 2020 A Texas Sampler is a tribute to the remarkable people who settled Texas. Excerpts from diaries, letters, and memoirs written by real Texans reveal the history of this great state. The workbook and text together create a package that dovetails with the Texas state-mandated curriculum requirements in Texas history at the fourth- and seventh-grade levels. The text provides the classroom teacher with much-needed primary source material, the workbook is a set of blackline masters to accompany the thirty-two chapters found in the book. Each activity is easy to use and easy to grade. In addition, opportunities for higher level thinking, writing practice, and the use of graphic organizers abound. Also included are answer keys and correlations to the fourth- and seventh-grade TEKS and TAAS objectives for writing, math, and reading.

Girls and Women of Color In STEM Feb 20 2022 Though there has been a rapid increase of women's representation in law and business, their representation in STEM fields has not been matched. Researchers have revealed that there are several environmental and social barriers including stereotypes, gender

bias, and the climate of science and engineering departments in colleges and universities that continue to block women's progress in STEM. In this book, the authors address the issues that encounter women of color in STEM in higher education.

English Learners Left Behind May 26 2022 In the wake of recent federal legislation entitled No Child Left Behind, high-stakes standardized testing for accountability purposes is being emphasized in educational systems across the U.S. for all students - including English Language Learners (ELLs). Yet language proficiency mediates test performance, so ELLs typically receive scores far below those of other students. This book explores how tests have become de facto language policy in schools, shaping what is taught in school, how it is taught, and in what language(s) it is taught. In New York City, while most schools responded to testing by increasing the amount of English instruction offered to ELLs, a few schools have preserved native language instruction instead. Moreover, this research documents how tests are a defining force in the daily lives of ELLs and the educators who serve them.

Elementary and Middle School Mathematics Aug 29 2022 "It is fun to figure out the puzzle of how children go about making sense of mathematics and then how to help teachers help kids." John A. Van de Walle, Late of Virginia Commonwealth University This is the philosophy behind Elementary and Middle School Mathematics: Teaching Developmentally. John A. Van de Walle wrote this book to help students understand mathematics and become confident in their ability to teach the subject to children in kindergarten through eighth grade. Although he could not have foreseen the changes in mathematics teaching over the last three decades, he was at the forefront of the movement towards a constructivist view of teaching, or teaching developmentally. Constructivism says that children construct their own knowledge. They are not blank slates waiting to absorb whatever the teacher tells them. Teachers must understand both mathematics itself and how students learn mathematics in order to teach it effectively. Learning through problem solving is another major theme of this book. Students solve problems not just to apply mathematics, but also to learn new mathematics. Effective problems will take into account where students are, the problematic or engaging aspect of the problem must be due to the mathematics that the students are to learn and not be diluted by non-mathematical activities such as cutting or pasting, and the problem must require justifications and explanations for answers and methods. Learning then becomes an outcome of the problem solving process. The book also addresses in more detail than any other book on the market the effect that the trends of standards-based education, increased pressure to test, and increased teacher accountability have had on teaching mathematics. He addresses the 2000 NCTM Standards in depth, in Chapter 1 on Teaching Mathematics in the Era of the NCTM Standards, through the NCTM icon that appears in the margins throughout the text, and in two appendices in the back of the book. Chapter 5 on Building Assessment into Instruction has also been heavily revised to focus on increased testing pressure, creating more explicit links between objectives and assessment, and including assessments for students with special needs. Elementary and Middle School Mathematics: Teaching Developmentally is a book for doing math today—for both students who want to become teachers, and the students they will eventually teach. New To This Edition: NEW! Revises Chapter 5 on assessment--Discusses increased testing pressure and accountability, adds more information on equitable assessments, creates more explicit links between objectives and assessment, and includes assessments for students with special needs. NEW! Updates the Literature Connections feature to remove all out of print children's literature and include more non-fiction, poetry, and other types of readings. NEW! Weaves the Focal Points throughout the chapters as

well as links them with the Big Ideas feature—Focal Points have also been added to the Appendix. **NEW!** Includes expanded coverage of working with diverse learners. **NEW!** Gives greater emphasis on dealing with math anxiety.

TEKS 5th Grade Math Test Prep for STAAR Sep 05 2020 Our Revised for 2014–2015 TEKS 5th Grade Math Test Prep for STAAR is an excellent resource to assess and manage student's understanding of concepts outlined in the State of Texas Assessments of Academic Readiness (STAAR) program. This resource is formatted into three sections: Diagnostic, Practice, and Assessment with multiple choice and open questions in each section. The material covered includes emphasis on Numerical Representations and Relationships problems to determine if student can demonstrate an understanding of how to represent and manipulate numbers and expressions. Additionally, emphasis is placed on Computations and Algebraic Relationships problems to determine students ability to demonstrate an understanding of how to perform operations and represent algebraic relationships. Geometry and Measurement problems are also covered to ensure students understand how to represent and apply geometry and measurement concepts. Finally, Data Analysis problems are covered to demonstrate students grasp of how to represent and analyze data. These standards are covered extensively by the practice problems. This book contains over 500 practice problems aligned to each TEKS Category. In addition the book contains an answer key to practice problems. Math Education for Gifted Students Nov 07 2020 For the first time, the "Gifted Child Today Reader" series brings together the best articles published in "Gifted Child Today", the nation's most popular gifted education journal. Each book in the series is filled with exciting and practical classroom ideas, useful summaries of research findings, discussions of identification and classroom management, and informed opinions about educating gifted kids. Anyone involved in education will benefit from the practical, research-based ideas this unique series has to offer. Given gifted students' accelerated and intuitive thought processes regarding mathematics, teachers need to design differentiated curricula and use strategies that increase the complexity and pace of instruction. The authors provide some specific strategies for both organizing a gifted program and teaching mathematically gifted students in either the general education classroom or in special settings. "Math Education for Gifted Students" offers information about how to differentiate for mathematically gifted students, as well as tried-and-true instructional strategies to employ, including tiered lessons, distance learning, and activities combining architecture and math.

Learning in the Fast Lane Oct 07 2020 Too often, students who fail a grade or a course receive remediation that ends up widening rather than closing achievement gaps. According to veteran classroom teacher and educational consultant Suzy Pepper Rollins, the true answer to supporting struggling students lies in acceleration. In Learning in the Fast Lane, she lays out a plan of action that teachers can use to immediately move underperforming students in the right direction and differentiate instruction for all learners—even those who excel academically. This essential guide identifies eight high-impact, research-based instructional approaches that will help you \* Make standards and learning goals explicit to students. \* Increase students' vocabulary—a key to their academic success. \* Build students' motivation and self-efficacy so that they become active, optimistic participants in class. \* Provide rich, timely feedback that enables students to improve when it counts. \* Address skill and knowledge gaps within the context of new learning. Students deserve no less than the most effective strategies available. These hands-on, ready-to-implement practices will enable you to provide all students with compelling, rigorous, and engaging learning experiences.
