Our Patchwork Nation Mar 15 2021 A revolutionary new way to understand America's complex cultural and political landscape, with proof that local communities have a major impact on the nation's behavior-in the voting booth and beyond. In a climate of culture wars and tremendous economic uncertainty, the media have often reduced America to a simplistic schism between red states and blue states. In response to that oversimplification, journalist Dante Chinni teamed up with political geographer James Gimpel to launch the Patchwork Nation project, using on-the-ground reporting and statistical analysis to get past generalizations and probe American communities in depth. The result is Our Patchwork Nation, a refreshing, sometimes startling, look at how America's diversities often defy conventional wisdom. Looking at the data, they recognized that the country breaks into twelve distinct types of communities, and old categories like "soccer mom" and "working class" don't matter as much as we think. Instead, by examining Boom Towns, Evangelical Epicenters, Military Bastions, Service Worker Centers, Campus and Careers, Immigration Nation, Minority Central, Tractor Community, Mormon Outposts, Emptying Nests, Industrial Metropolises, and Monied Burbs, the authors demonstrate the subtle distinctions in how Americans vote, invest, shop, and otherwise behave, reflect what they experience on their local streets and in their daily lives. Our Patchwork Nation is a brilliant new way to debate and examine the issues that matter most to our communities, and to our nation.

Capitalism and Natural Law Aug 20 2021 The author begins with the statement "Christianity and Capitalism both seem to be going through a bit of a rough patch at the time of writing." Each of these concerns is enough to motivate a book, but Robert N. McGrath, PhD, is concerned about the nexus of the two. He begins with the observation that many people cannot articulate a clear understanding of either capitalism or natural law. First, capitalism means more than "free enterprise." Capitalism is first a theory of economics where capital is accumulated, allocated, and managed productively in order to increase the economic welfare of society. Such a theory is an outgrowth of centuries of philosophy. Second, natural law theology goes back to ancient Greek and Roman philosophers, but evolved with Christian doctrine to become central to that faith's present theology. In the meantime, people such as Thomas Aquinas, John Locke, and Thomas Jefferson ensconced it deeply into the very psyche of Western civilization and its philosophy, including economic thought. After explaining this, the author examines original words of eminent "modern" economists since Adam Smith, into the twentieth century with Joseph Schumpeter, the very champion of entrepreneurship as being the "essence of capitalism." Several interim-period economists also implied that economic "laws" are "natural," while others have been adamantly and even violently opposed to any such view. However, the author continuously insists that his purpose is to be provocative, not definitive, and leaves final interpretations largely to each reader.

CO2 in Seawater: Equilibrium, Kinetics, Isotopes Sep 28 2019 Carbon dioxide is the most important greenhouse gas after water vapor in the atmosphere of the earth. More than 98% of the carbon of the atmosphere-ocean system is stored in the oceans as dissolved inorganic carbon. The key for understanding critical processes of the marine carbon cycle is a sound knowledge of the seawater carbonate chemistry, including equilibrium and nonequilibrium properties as well as stable isotope fractionation. Presenting the first coherent text describing equilibrium and nonequilibrium properties and stable isotope fractionation among the elements of the carbonate system. This volume presents an overview and a synthesis of these subjects which should be useful for graduate students and researchers in various fields such as biogeochemistry, chemical oceanography, paleoceanography, marine biology, marine chemistry, marine geology, and others. The volume includes an introduction to the equilibrium properties of the carbonate system in which basic concepts such as equilibrium constants, alkalinity, pH scales, and buffering are

discussed. It also deals with the nonequilibrium properties of the seawater carbonate chemistry. Whereas principle of chemical kinetics are recapitulated, reaction rates and relaxation times of the carbonate system are considered in details. The book also provides a general introduction to stable isotope fractionation and describes the partitioning of carbon, oxygen, and boron isotopes between the species of the carbonate system. The appendix contains formulas for the equilibrium constants of the carbonate system, mathematical expressions to calculate carbonate system parameters, answers to exercises and more.

In The Post-Urban World Apr 27 2022 Winner of the Regional Studies Association's Best Book Award 2018. In the last few decades, many global cities and towns have experienced unprecedented economic, social, and spatial structural change. Today, we find ourselves at the juncture between entering a post-urban and a post-political world, both presenting new challenges to our metropolitan regions, municipalities, and cities. Many megacities, declining regions and towns are experiencing an increase in the number of complex problems regarding internal relationships, governance, and external connections. In particular, a growing disparity exists between citizens that are socially excluded within declining physical and economic realms and those situated in thriving geographic areas. This book conveys how forces of structural change shape the urban landscape. In The Post-Urban World is divided into three main sections: Spatial Transformations and the New Geography of Cities and Regions; Urbanization, Knowledge Economies, and Social Structuration; and New Cultures in a Post-Political and Post-Resilient World. One important subject covered in this book, in addition to the spatial and economic forces that shape our regions, cities, and neighbourhoods, is the social, cultural, ecological, and psychological aspects which are also critically involved. Additionally, the urban transformation occurring throughout cities is thoroughly discussed. Written by today's leading experts in urban studies, this book discusses subjects from different theoretical standpoints, as well as various methodological approaches and perspectives; this is alongside the challenges and new solutions for cities and regions in an interconnected world of global economies. This book is aimed at both academic researchers interested in regional development, economic geography and urban studies, as well as practitioners and policy makers in urban development.

A Country is Not a Company May 17 2021 Nobel-Prize-winning economist Paul Krugman argues that business leaders need to understand the differences between economic policy on the national and international scale and business strategy on the organizational scale. Economists deal with the closed system of a national economy, whereas executives live in the open-system world of business. Moreover, economists know that an economy must be run on the basis of general principles, but businesspeople are forever in search of the particular brilliant strategy. Krugman's article serves to elucidate the world of economics for businesspeople who are so close to it and yet are continually frustrated by what they see. Crowd Design Jun 17 2021 The digital revolution is interwoven with the promise to empower the user. Yet, the rise of centralized, commercial platforms for crowdsourced work questions the validity of this narrative. In Crowd-Design, Florian Alexander Schmidt analyses the workings and the rhetoric of crowdsourced work platforms by comparing the way they address the masses today with historic notions of the crowd. The utopian concepts of early online collaboration are taken as a vantage point from which to view and critique current and, at times, dystopian applications of crowdsourced work. The study is focused on the crowdsourcing of design tasks, but these specific applications are used to examine the design of the more general mechanisms employed by the platform providers to motivate and control the crowds. Crowd-Design is as much about the crowdsourcing of design as it is about the design of crowdsourcing.

On Intelligence Feb 11 2021 From the inventor of the PalmPilot comes a new and compelling theory of intelligence, brain function, and the future of intelligent machines Jeff Hawkins, the man who created the PalmPilot, Treo smart phone, and other handheld devices, has reshaped our relationship to computers. Now he stands ready to revolutionize both neuroscience and computing in one stroke, with a new understanding of intelligence itself. Hawkins develops a powerful theory of how the human brain works, explaining why computers are not intelligent and how, based on this new theory, we can finally build intelligent machines. The brain is not a computer, but a memory system that stores experiences in a way that reflects the true structure of the world, remembering sequences of events and their nested relationships and making predictions based on those memories. It is this memory-prediction system that forms the basis of intelligence, perception, creativity, and even consciousness. In an engaging style that will captivate audiences from the merely curious to the professional scientist, Hawkins shows how a clear understanding of how the brain works will make it possible for us to build intelligent machines, in silicon, that will exceed our human ability in surprising ways. Written with acclaimed science writer Sandra Blakeslee, On Intelligence promises to completely transfigure the possibilities of the technology age. It is a landmark book in its scope and clarity.

Desperately Seeking the Audience Dec 12 2020 Millions of people all over the world are avid members of the television audience. Yet, despite the central place television occupies in contemporary culture, our understanding of its complex and dynamic role in everyday life remains surprisingly limited. Focusing on the television audience, Ien Ang asks why we understand so little about its nature, and argues that

our ignorance arises directly out of the biases inherent in prevailing official knowledge about it. She sets out to deconstruct the assumptions of this official knowledge by exploring the territory where it is mainly produced - the television institutions. Ang draws on Foucault's theory of power/knowledge to scrutinize television's desperate search for the audience, and to identify differences and similarities in the approaches of American commercial television and European public service television to their audiences. She looks carefully at recent developments in the field of ratings research, in particular the controversial introduction of the `people meter' as an instrument for measuring the television audience. By defining the limits and limitations of these institutional procedures of knowledge production, Ien Ang opens up new avenues for understanding television audiences. Her ethnographic perspective on the television audience gives new insights into our television culture, with the audience seen not as an object to be controlled, but as an active social subject, engaging with television in a variety of cultural and creative ways.

Getting to Zero Alcohol-Impaired Driving Fatalities Nov 22 2021 Alcohol-impaired driving is an important health and social issue as it remains a major risk to Americans' health today, surpassing deaths per year of certain cancers, HIV/AIDS, and drownings, among others, and contributing to long-term disabilities from head and spinal injuries. Progress has been made over the past decades towards reducing these trends, but that progress has been incremental and has stagnated more recently. Getting to Zero Alcohol-Impaired Driving Fatalities examines which interventions (programs, systems, and policies) are most promising to prevent injuries and death from alcohol-impaired driving, the barriers to action and approaches to overcome them, and which interventions need to be changed or adopted. This report makes broad-reaching recommendations that will serve as a blueprint for the nation to accelerate the progress in reducing alcohol-impaired driving fatalities.

How Pornography Harms Jul 27 2019 Pornography is menacing people, relationships, and society, and this book has the research and stories to prove it. John D. Foubert, Ph.D., an interdisciplinary scholar who has studied sexual violence since 1993, shares the life stories of more than twenty people directly affected by pornography. He also interviews scholars and explains how pornography affects our brains. In examining the many ways pornography is devouring the God-given sexual health of the Internet generation, he highlights its connection to sexual violence and how it ruins lives. He also focuses on who makes pornography and their motives, recent trends in pornography, and how pornography is changing the way people have sex. Perhaps most importantly, he explains what we can do to confront pornography in our own lives, the lives of our loved ones, and in society. Whether you are a teen, young adult, a parent, pastor, scholar, or you are just curious about what pornography does to people, your conscience will be shocked and your points of view deeply challenged by what Foubert has uncovered about the reality of todays pornography.

Take Us to Your Chief Mar 03 2020 A forgotten Haudenosaunee social song beams into the cosmos like a homing beacon for interstellar visitors. A computer learns to feel sadness and grief from the history of atrocities committed against First Nations. A young Native man discovers the secret to time travel in ancient petroglyphs. Drawing inspiration from science fiction legends like Arthur C. Clarke, Isaac Asimov and Ray Bradbury, Drew Hayden Taylor frames classic science-fiction tropes in an Aboriginal perspective. The nine stories in this

collection span all traditional topics of science fiction--from peaceful aliens to hostile invaders; from space travel to time travel; from government conspiracies to connections across generations. Yet Taylor's First Nations perspective draws fresh parallels, likening the cultural implications of alien contact to those of the arrival of Europeans in the Americas, or highlighting the impossibility of remaining a "good Native" in such an unnatural situation as a space mission. Infused with Native stories and variously mysterious, magical and humorous, Take Us to Your Chief is the perfect mesh of nostalgically 1950s-esque science fiction with modern First Nations discourse.
