Places That Matter Feb 07 2021 Places that Matter asks the reader to identify a place that matters in their life—their home, a place of worship, a park, or some other site that acts as an emotional and physical anchor and connects them to a neighborhood. Then readers are asked: In what ways do I currently support—or fail to support—that neighborhood? Should support be increased? If so, in what ways? Joan Ferrante guides students through a learning experience that engages qualitative and quantitative research and culminates in writing a meaningful plan of action or research brief. Students are introduced to basic concepts of research and are exposed to the experiences of gathering and drawing on data related to something immediate and personal. The class-tested exercises are perfect for courses that emphasize action-based research and social responsibility. The book's overarching goal is to help students assess their neighborhood's needs and strengths and then create a concrete plan that supports that neighborhood and promotes its prosperity. Accompanying the book is a facilitator's companion website to guide action-based research experiences, which includes rubrics that are aligned to common learning objectives and are also designed to make tracking and reporting easier.

Research Priorities for Airborne Particulate Matter File 19 2022 In 1997, the U.S. Environmental Protection Agency (EPA) established regulatory standards to address health risks posed by inhaling tiny particles from smoke, vehicle exhaust, and other sources. At the same time, Congress and the EPA began a multimillion dollar research effort to better understand the sources of these airborne particles, the levels of exposure to people, and the ways that these particles cause disease. To provide independent guidance to the EPA, Congress asked the National Research Council to study the relevant issues. The result was a series of four reports on the particulate-matter research program. The first two books offered a conceptual framework for a national research program, identified the 10 most critical research needs, and described the recommended timing and estimated costs of such research. The third volume began the task of assessing initial progress made in implementing the research program. This, the fourth and final volume, gauged research progress made over a 5-year period on each of the 10 research topics. The National Research Council concludes that particulate matter research has led to a better understanding of the health effects caused by tiny airborne particles. However, the EPA, in concert with other agencies, should continue research to reduce further uncertainties and inform long-term decisions.

Sexy and smart, Kate is Ellen's dream girl, but the dynamic TV newscaster doesn't know Ellen exists. Struggling with self-doubt and low self-esteem, Ellen can only watch the parade of beautiful women Kate brings home. But a rainy night and near tragedy change everything when Kate is involved in an automobile accident and turns to Ellen for help. Withdrawing from the world, Kate comes to depend upon Ellen for far more than she realizes—until the day Ellen tells her that she is leaving on sabbatical. Ellen and Kate's journey leads them beyond the transitory nature of superficial beauty to the true splendor of the love they hold in their hearts.

Feb 25 2020 This textbook is based on a mixture of simplified institutional theory and solved problems. The choice has been to limit the attention to key concepts and to the most typical aspects of atoms, molecules and solids, looking at the basic "structural" aspects without dealing in detail with the properties originating from them. The problems are entangled to the formal presentation of the arguments, being designed as an intrinsic part of the pathway the student should move by in order to grasp the key concepts.

Light-Matter Interaction Jan 18 2019 Light-matter interaction is pervasive throughout the disciplines of optical and atomic physics, condensed matter physics, electrical engineering, and now increasingly in biology and medicine with frequency and length scales extending over many orders of magnitude. Deep earth and sea communications use frequencies of a few tens of Hz, and X-ray imaging requires sources oscillating at hundreds of petaHz. This book provides advanced undergraduates, graduate students and researchers from diverse disciplines with the principal tools required to understand and contribute to rapidly advancing developments in light-matter interaction, centred at optical frequencies and length scales from a few hundred nanometres to a few hundredths of a nanometre. This book deploys an arsenal of powerful analytic tools to render this multidisciplinary subject in unique form, not encountered in standard Physics or Electrical Engineering text books. This new edition has been substantially expanded with almost 200 pages of new material. Several new and extended chapters treat momentum flow between fields and matter, metamaterials, and atomic optical forces applied to atomic and molecular cooling and trapping.
