**Proceedings of the 21st Congress of the International Ergonomics Association (IEA 2021)** Aug 28 2019 This book presents the proceedings of the 21st Congress of the International Ergonomics Association (IEA 2021), held online on June 13-18, 2021. By highlighting the latest theories and models, as well as cutting-edge technologies and applications, and by combining findings from a range of disciplines including engineering, design, robotics, healthcare, management, computer science, human biology and behavioral science, it provides researchers and practitioners alike with a comprehensive, timely guide on human factors and ergonomics. It also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance, while at the same time promoting the health, safety and wellbeing of individuals. The proceedings include papers from researchers and practitioners, scientists and physicians, institutional leaders, managers and policy makers that contribute to constructing the Human Factors and Ergonomics approach across a variety of methodologies, domains and productive sectors. This volume includes papers addressing the following topics: Healthcare Ergonomics, Health and Safety, Musculoskeletal Disorders, HF/E Contribution to cope with Covid-19.

**Protective Systems Against Hazards** Aug 01 2022 The enormous growth in scale and complexity of modern industrial facilities, and the associated increase in consumption of energy and raw materials, has put the environment under pressure in terms of depletion of basic resources and safety. Large-scale industrial accidents and severe pollution of the biosphere, as well as detailed analyses of hazard scenarios, have revealed the need for reconsidering currently used safety concepts. Among the many aspects involved in such a process of reconsideration, the protection of the environment is one of the important issues. This report is the first of an intended series of three reports on structural protective systems against hazards. This first report deals with the nature and extent of the problem. Currently used safety concepts are briefly mentioned and evaluated. A survey of hazards and hazard scenarios further illustrates the weak points in traditional solutions. This evaluation reveals that the adoption of concrete structures can substantially enhance the safety of people and of the environment. Some examples of concrete protective structures are presented, showing the potentialities of concrete structures for reliable protection. The material for this report has been brought together by a small group of experts from the chemical and the building industry, consultants, authorities and the academic world. The input of individual members consisted of active participation in meetings of the working group and corresponding membership. The working group was part of the former FIP Commission 8 Concrete Storage Vessel Systems. After the merger of FIP and CEB in May 1998, the work has been and will continue in the framework of fib Commission 3 Environmental Aspects of Design and Construction.
