Multiobjective Shape Design in Electricity and Magnetism Feb 13 2021 Multiobjective Shape Design in Electricity and Magnetism is entirely focused on electric and magnetic field synthesis, with special emphasis on the optimal shape design of devices when conflicting objectives are to be fulfilled. Direct problems are solved by means of finite-element analysis, while evolutionary computing is used to solve multiobjective inverse problems. This approach, which is original, is coherently developed throughout the whole manuscript. The use of game theory, dynamic optimisation, and Bayesian imaging strengthens the originality of the book. Covering the development of multiobjective optimisation in the past ten years, Multiobjective Shape Design in Electricity and Magnetism is a concise, comprehensive and up-to-date introduction to this research field, which is growing in the community of electricity and magnetism. Theoretical issues are illustrated by practical examples. In particular, a test problem

is solved by different methods so that, by comparison of results, advantages and limitations of the various methods are made clear.

The book is unique in its style of presentation. Independent thought process beyond conventional way of learning is essential for deep insight of any subject, and this book has been written with this philosophy. Some new concepts, topics, figures and terminology will be found in various places in the book, most significant one being the marked distinction between the potential energy (PE) and stored energy (SE). Such concepts basically emerged from author's own thought process, and hence, remain open for debate and corrective criticism,

expected mainly from the teaching fraternity.
