Instrument Engineers' Handbook, Volume Two Sep 09 2020 The latest update to Bela Liptak's acclaimed "bible" of instrument engineering is now available. Retaining the format that made the previous editions bestsellers in their own right, the fourth edition of Process Control and Optimization continues the tradition of providing quick and easy access to highly practical information. The authors are practicing engineers, not theoretical people from academia, and their from-the-trenches advice has been repeatedly tested in real-life applications. Expanded coverage includes descriptions of overseas manufacturer's products and concepts, model-based optimization in control theory, new major inventions and innovations in control valves, and a full chapter devoted to safety. With more than 2000 graphs, figures, and tables, this all-inclusive encyclopedic volume replaces an entire library with one authoritative reference. The fourth edition brings the content of the previous editions completely up to date, incorporates the developments of the last decade, and broadens the horizons of the work from an American to a global perspective. Béla G. Lipták speaks on Post-Oil Energy Technology on the AT&T Tech Channel.

Bast and Other Plant Fibres Dec 13 2020 Bast and Other Plant Fibres, a title in Woodhead Publishing's series on fibres published in association with The Textile Institute, UK, is the first book in over 50 years to cover the most interesting plant fibres and those with high annual production. Bast fibres have many textile applications, with natural fibre composites being the fastest growing due to the combination of their relatively low cost and excellent technical characteristics. Following the editor's introductory chapter, which includes a comprehensive set of tables comparing the physical and chemical characteristics of the fibres, Chapter 2 discusses jute while Chapters 3 and 4 cover flax and hemp. Subsequent chapters are devoted to ramie, sisal, coir and abaca. Chapter 9 brings together information on minor fibres that may deserve greater interest on the part of international markets, while Chapter 10 is dedicated to the use of bast and leaf fibres in composites. Information is included on production and processing, physical and chemical properties, and on economic, environmental, and health and safety considerations. This book is an essential reference to academics and researchers in agriculture and horticulture as well as those working in textiles, apparel and industrial design, and textile testing and forensic science laboratories. It will also be invaluable to those working in government departments such as agriculture or trade and industry. Essential discussion on chemical and physical properties of individual natural fibres Looks at environmental advantages of bast fibres over synthetic fibres First book of its kind in over 50 years

Process Control Aug 28 2019 Instrument Engineers' Handbook, Third Edition: Process Control provides information pertinent to control hardware, including transmitters, controllers, control valves, displays, and computer systems. This book presents the control theory and shows how the unit processes of distillation and chemical reaction should be controlled. Organized into eight chapters, this edition begins with an overview of the method needed for the state-of-the-art practice of process control. This text then examines the relative merits of digital and analog displays and computers. Other chapters consider the basic industrial annunciators and other alarm systems, which consist of multiple individual alarm points that are connected to a trouble contact, a logic module, and a visual indicator. This book discusses as well the data loggers available for process control applications. The final chapter deals with the various pump control systems, the features and designs of variable-speed drives, and the metering pumps. This book is a valuable resource for engineers.
