E - Learning Modules Oct 15 2021 The term e-Learning is a neologism for CSCL systems that c about during the emergence of website e-learning modules. From an e-learning perspective, conventional e-learning systems were then based on instructional packets, which were delive

students using assignments. Assignments were evaluated by the instructor. In contrast, the new learning places increased emphasis on social learning and use of social software such as blogs, podcasts and virtual worlds such as Second Life. This phenomenon has also been referred to as Tail Learning. E-learning by contrast to e-learning systems not based on CSCL, assumes that knowledge (as meaning and understanding) is socially constructed. Learning takes place through conversations about content and grounded interaction about problems and actions. Advocates of social learning claim that one of the best ways to learn something is to teach it to others. He should be noted that many early online courses, such as those developed by Murray Turoff and Roxanne Hiltz in the 1970s and 80s at the New Jersey Institute of Technology, courses at the University of Guelph in Canada, the British Open University, and the online distance courses at the University of British Columbia (where Web CT, now incorporated into Blackboard Inc. was first developed), have always made heavy use of online discussion between students. Also, from the practitioners such as Harasim in 1995, have put heavy emphasis on the use of learning networks for knowledge construction, long before the term e-learning, let alone CSCL, was even considered. It is also an increased use of virtual classrooms (online presentations delivered live) as an online learning platform and classroom for a diverse set of education providers such as Minnesota State Colleges and Universities and Sachem, MN, School District. In addition to virtual classroom environments, social networks have become an important part of e-learning. Social networks have been used to foster online learning communities around subjects as diverse as test preparation and language education. Mobile Assisted Language Learning (MALL) is a term used to describe using handheld computers or cell phones to assist in language learning. Some feel, however, that social networks have not caught up with the social networking trends. Few traditional educators promote social networking unless they are communicating with their own colleagues. DLR Associates consulting group first became interested in e-learning modules at the annual Distance Learning Conference at the University of Maine. I decided to offer e-learning services, since we were already evolving computer-assisted education techniques. DLR Associates had been involved with CAE since computers were first used in engineering education. It was our hope a trend could be started in blended learning services, where computer-based activities were integrated with practical or classroom-based situations. Apr 09 2021 This book is a
compilation of common and uncommon surgical and ancillary techniques that we have found
in the multiorgan transplantation program at the University of Minnesota. Descriptions of the

techniques are not available at a single source elsewhere. Use the book as a teaching aid, a source of workable techniques, and as a reference for individuals with relatively little experience in a particular area of transplantation. Because of the varying levels of expertise of our readers, vascular access is described in exquisite detail, as it is aimed at an audience of individuals who want to learn the fine points about how to prolong the function of shunts. The chapter on organ preservation is aimed at the transplant surgeon or beginning technician who must learn how to do it from scratch--even the catalog numbers of the necessary equipment are included. In contrast the chapters on heart, liver, and pancreas transplantation, while omitting fine points of suture technique, concentrate on the basic principles and safeguards. Individuals contemplating such transplants are presumably already schooled in the fine points of surgical technique. The chapters on cadaver organ donation are perhaps the most innovative. They represent our attempt to reorganize organ donation in a way that will provide the greatest usefulness of each donor as a source for multiple organs for transplantation. We hope that the book will become available to centers that, while not performing liver, pancreas, or heart transplants, wish to serve as donation centers.

Global Mobile Satellite Communications Feb 25 2020 Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircraft telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers. Mobile satellite communications technology have been in use for over two decades. Its initial application is aimed at the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for maritime shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. Mobile Satellite Communications is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style understandable technical information, characteristics, graphics, illustrations and mathematical equations. Global Mobile Satellite Communications represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of vehicles, on planes, on off shore constructions and for everyone possessing satellite communication handset phones.

Developing Capacity for Community Governance of Natural Resources Theory & Practice
2020 Community-based natural resource management (CBNRM) is a compelling concept that combines community custodianship of natural resources with sustainable development and poverty reduction. However, there is a large gap between the conceptual promise and actual performance of CBNRM. CBNRM is complex and challenging, and one of the major challenges is what we call micro-governance--how to replace the ubiquitous problem of elite capture within communities with local participation and equitable benefit sharing. This book is for people who want to understand and implement CBNRM governance more effectively, including graduate students, scholars and practitioners. It is targeted most specifically at the scholar-practitioner who wants to draw on governance theory to know why and how to work with communities to implement sound local institutions. The perspectives and resources presented have been developed and tested over years of working with CBNRM communities in southern Africa. The book offers convincing evidence for preferring participatory democracy over representational forms of governance, and discusses how to manage the scale paradox that economies and ecologies are better managed at larger scales, but larger representational institutions invariably forfeit critical public goods like participation and equitable benefit sharing. The book's purpose is to provide the reader with the practical tools to operationalize "good governance" at the village level, in ways that are theoretically sound. It provides the reader with theoretical insights and practical lessons about micro-governance in the context of CBNRM, tools for designing and implementing conceptually rigorous community constitutions that enable communities to govern themselves fairly and effectively, and resources for developing management and monitoring systems necessary to protect these conditions.

Apple's latest "affordable" flagship iPhones. They are available alongside the more costly iPhone
Pro and iPhone 14 Pro Max. Apple discontinued the "mini" iPhone in 2022, and the iPhone 14
versions are available in 6.1- and 6.7-inch sizes. The new 6.7-inch iPhone 14 is dubbed the "iP

14 Plus," a reference to the iPhone 8 and 8 Plus, as well as previous models. Apple's iPhone 14 models are similar to the iPhone 13 models in terms of design, with flat corners, an aerospace aluminum casing, and a glass back that supports wireless charging. The iPhone 14 is available in blue, purple, midnight, starlight, and (PRODUCT)RED colors. The iPhone 14 and 14 Plus, unlike the iPhone 14 Pro versions, retain a notch at the top of the display that houses the TrueDepth camera. The ordinary iPhone 14 versions do not include ProMotion display technology, which is only available in the Pro variants. The Impact of Emerging Technologies on the Law of Armed Conflict 2019 Emerging technologies have always played an important role in armed conflict. From the crossbow to c capabilities, technology that could be weaponized to create an advantage over an adversary h inevitably found its way into military arsenals for use in armed conflict. The weaponization of emerging technologies, however, raises challenging legal issues with respect to the law of ar conflict. As States continue to develop and exploit new technologies, how will the law of ar conflict address the use of these technologies on the battlefield? Is existing law sufficient to new technologies, such as cyber capabilities, autonomous weapons systems, and artificial intelligence? Have emerging technologies fundamentally altered the way we should understand concepts such as law-of-war precautions and the principle of distinction? How can we ensure compliance and accountability in light of technological advancement? This volume of the Lieber Studies explores these critical questions while highlighting the legal challenges--and opportunities--presented by the use of emerging technologies on the battlefield.
