Software User Documentation Aug 13 2021 I N T R O D U C T I O N Good manuals are a scarce commodity - expensive to produce, difficult to maintain, the province of experts. Not any more. With this new step-by-step guide you can produce successful manuals at a fraction of the normal cost. Software user Documentation: A How To Guide for Project Staff is a detailed reference guide to the preparation of effective user documentation for computer software applica-tions. It is intended for people who wish to develop software user documentation. The format and arrangement of this manual re-flects the principles outlined within it - it 'practices what it preaches'. No prior knowledge or experience of user documentation writ-ing is assumed. The manual is designed to equip a person with at least average written expression skills with a blueprint of how to prepare a software user manual. Provided the person is prepared to follow the instructions through to completion, the result will be an effective piece of documentation. It can be used by practicing user documenters and technical writers as a checklist of what to include in a piece of documen-tation. The information given in this manual conforms with the interna-tionally recognised IEEE Standard 1063 which relates to the requirements for software user documentation. S O W H A T M A K E S A N E F F E C T I V E M A N U A L ? Organisation - Good manuals are well-structured with comprehensive table of contents and index. Content - The material focuses on user tasks, provides clear instructions and is concise. Appearance - The presentation is attractive with plenty of white space, and are packaged in booklets that are easy to use. Language - The text is easy to read and aimed specifically at the users. What to Avoid - Users dislike manuals that are: inaccurate, contain too much detail, talks down to people, is too formal, is poorly presented and/or organised.

Digital Spectral Analysis MATLAB® Software User Guide Apr 21 2022 This user guide serves as a companion to Digital Spectral Analysis, Second Edition (Dover Publications, 2019), illustrating all the text's techniques and algorithms, plus time versus frequency analysis. The spectral demonstrations use MATLAB software that encompasses the full experience from inputting signal sources, interactively setting technique parameters and processing with those parameters, and choosing from a variety of plotting techniques to display the results. The processing functions and scripts have been coded to automatically handle sample data that is either real-valued or complex-valued, permitting the user to simply modify the demonstration scripts to input their own data for analysis. Four integrated software categories support the demonstrations. These are the main MATLAB spectral demonstration scripts, supporting MATLAB plotting scripts, MATLAB processing functions listed in this guide, and signal sample data sources. Scripts and demonstration data files can be found on the Dover website for free downloading; see the Introduction for details.
